

# Praxis is Moving towards Green

By moving towards Green, Praxis is not only helping to improve personal health and comfort by creating healthier environments for homeowners, but we are also helping the planet! Below are just some of the ways that the Praxis Companies, LLC is moving towards Green.

- Praxis meets the U.S. Environmental Protection Agency (EPA) MACT emission reduction requirements which require the use of low-emitting resins and work practices to reduce emissions.
- Low styrene content in both Gelcoat and Acrylic units produced by Praxis.
- Praxis offers HDPE (high density polyethylene) seats that contain recycled materials.
- Praxis reduces production waste by reusing and recycling cut-off materials from production.
- Praxis has reduced solvent use by using non-acetone, water based cleaners.
- Through the use of automated and robotic production, Praxis is producing consistently high quality product while generating less waste.
- Praxis gets more product to market per truck. This means Praxis makes fewer trips to market; thus, lessening fuel consumption.
